dear member

Your Field Museum membership has become even more valuable in these challenging economic times. With free general admission and free limited tickets to special exhibitions, you save every time you visit. Here are some steps you can take to make your visit extra special.

Review your *In The Field* magazine: *ITF* is a great tool for planning your visit and is strictly for you, our member. It keeps you informed of upcoming special exhibitions and programs and features articles on our scientific work.

Visit The Field Museum website: At **fieldmuseum.org** you can learn about many of our exhibitions before you arrive to make your visit even more fulfilling.

You can also get updated information through the Museum e-newsletter and our member e-blasts. Send your membership account number and your email address to membership@fieldmuseum.org to receive these emails.

Reserve tickets in advance: Popular special exhibitions such as *Real Pirates* tend to sell out earlier on busy days. Reserve free tickets two to three days in advance by calling 312.665.7705, weekdays 8:30am–4:30pm, or order your tickets online at fieldmuseum.org/membership/tickets.htm.

Bring your Member Card and Photo ID: You can check in at the membership desk with a photo ID, but the line moves faster if you have both your ID and member card. If you haven't received your member card, please contact our office at 312.665.7700.

DIAME ALEXANDER WHITE

Talk to us! We're listening. Our members are important to us and we appreciate your comments and support. You can email us at membership@fieldmuseum.org or call us weekdays at 312.655.7700.

As always, we thank you for your continued support.

Michelle Clayton
Director of Membership

Museum Campus Neighbors

Shedd Aquarium The belugas are back at Shedd Aquarium! So are the dolphins, sea otters, sea lions and penguins! The Oceanarium has been reimagined, with renovated habitats, a beluga encounter pool and a new Polar Play Zone especially for kids. Dining at Shedd has gone al fresco with the new north patio. For more information, visit www.sheddaquarium.com or call **312.939.2438**

Adler Planetarium Celebrating the *International Year of Astronomy* and the 400th anniversary of the telescope, the Adler is presenting *Telescopes: Through the Looking Glass* (through Dec. 31). The exhibition explores how these amazing instruments have changed our concepts of the Universe. Also this summer, join us in celebrating the 40th anniversary of the Apollo 11 Moon landing. For more information, visit www.adlerplanetarium.org or call **312.922.STAR**

MANY BUSES AND RAIL LINES PROVIDE ACCESS TO THE FIELD MUSEUM. FOR MORE INFORMATION, CALL **888.YOURCTA** OR VISIT WWW.TRANSITCHICAGO.COM VISIT WWW.RTACHICAGO.COM FOR REGIONAL TRANSIT INFORMATION.

Experience Dinosaurs, Mummies and More in 3D

By Emily Waldren, Editor

If you've ever walked through *Evolving Planet* and wished you could see dinosaurs in action, or explored *Inside Ancient Egypt* wondering what more the ancient mummies might tell us, you're in luck.

The Field Museum recently opened the Ernst & Young 3D Theater, located on the Museum's mezzanine, next to *Evolving Planet*. Museum Senior Vice President Laura Sadler explains, "The Museum has had many requests through the years to add a theater. Now that the theater has opened, visitors are seeing Museum exhibitions in a whole new light."

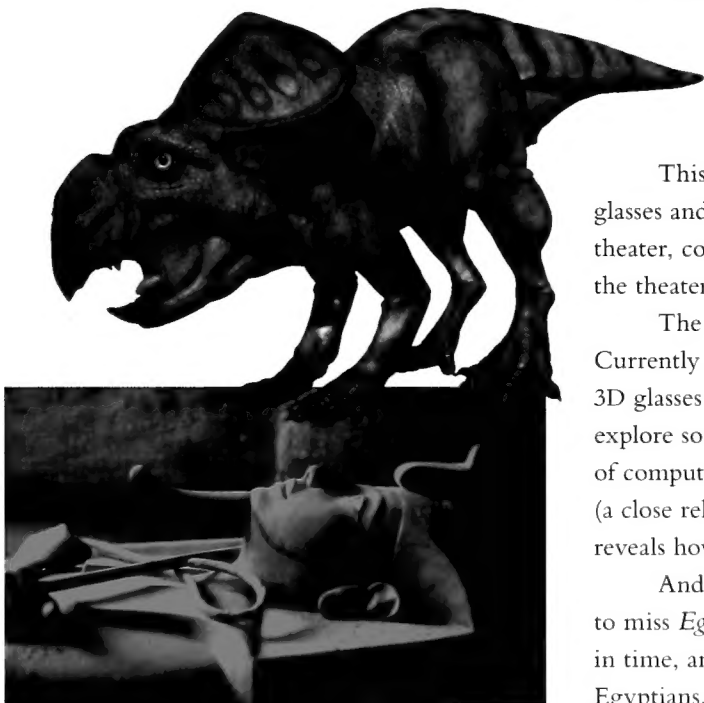

This isn't your 1950s sci-fi 3D either—gone are the blue and red glasses and fuzzy pictures. Instead, you'll find a state-of-the-art, digital 3D theater, complete with a surround-sound system. Using the latest technology, the theater will bring some of the Museum's favorite exhibitions to life.

The movie theater will run multiple films throughout the year. Currently thrilling all dinosaur fans is *Dinosaurs Alive! 3D*. Equipped with 3D glasses and a sense of adventure, audiences follow paleontologists as they explore some of the greatest dinosaur finds in history. Through the magic of computer animation, audiences will meet and learn about *Tarbosaurus* (a close relative to *T. rex*), *Velociraptor*, *Protoceratops*, and more. The film reveals how paleontologists search for, discover, and study fossils.

And if you like all things Egyptian, then you definitely don't want to miss *Egypt 3D: Secrets of the Mummies* (premiering in Nov.). Travel back in time, and discover why mummification was so important to ancient Egyptians. Learn about the incredible late 19th century discovery of 40 royal mummies in a single tomb—among them, three of the greatest pharaohs including Ramses the Great.

Tickets to the Museum's 3D movies are \$5 for all ages. Purchase your tickets when checking in to the Membership desk. **ITF**

Dinosaurs and mummies are coming alive in the Museum's new 3D theater.

Dive into Earth's Most Precious Resource

See *Water* at The Field Museum Through September 20

By Orly Telisman, Manager of Media Relations

Did you know that less than three percent of all water on Earth is fresh and less than one-third of that is in liquid form? The next time you turn on the faucet to get a drink, just imagine all the species, mammoth and microscopic, that this single resource sustains. Water is life-giving, yet finite. In some parts of the world, water is taken for granted; in others, it is coveted.

This summer The Field Museum presents *Water*—a timely, in-depth, thought-provoking experience for the whole family. The exhibition focuses on how we use water, as well as the future of this natural resource. Though water is essential to life on Earth, it can also cause hardships. Whether living on a lake that floods annually, or walking for miles to access clean water, different cultures have adapted to a variety of water-related challenges. *Water* explores the many ways water shapes life on Earth, making our planet livable.

Water incorporates numerous hands-on interactive experiences, including a simulation of a river dam, immersive dioramas, and a seven-foot globe featuring a multimedia presentation. Visitors will also be able to demonstrate what a lot (or a little) rain can do to a landscape. Using a computer mouse and LCD screens, Museum members will be able to “create” their own rain on Mount Rainier, and watch the water drain from the area. The Field Museum hopes visitors will become inspired by conservation efforts from around the world and discover what they can do to protect and conserve our planet’s water.

Giving Water a Local Touch

The exhibition features unique elements, focusing visitors’ attention on extensive information about our area’s largest source of fresh water: Lake Michigan. The Museum’s Conservation Director Laurel Ross says, “Because the Chicago region is so close to Lake Michigan, some might think water conservation is someone else’s issue. It is not. *Water* visitors will leave with an understanding of why water conservation is critical to the survival of all life on our planet.”

Chicago is home to the world’s largest conventional water purification and treatment plants. Visitors will get to see an exclusive video illustrating the daily purification and treatment processes: in other words, what happens before the faucet and after the flush. The process for Chicago’s water begins two miles off the Lake Michigan shoreline at water intake cribs—the entry point for a giant tunnel that conveys water to the purification plant—and ends on the southwest side where millions of gallons of wastewater are treated and returned to the water cycle.

“This is a fantastic opportunity to learn about the critical role water plays in our lives” says Philip Willink, PhD, assistant collections manager of fishes at The Field Museum. “It is necessary to understand how humans interact with water if we are to appreciate and effectively manage this precious resource.” **ITF**

Water is organized by the American Museum of Natural History, New York, and the Science Museum of Minnesota, St. Paul, in collaboration with The Field Museum, Chicago; Great Lakes Science Center, Cleveland; Instituto Sangari, São Paulo, Brazil; National Museum of Australia, Canberra; Royal Ontario Museum, Toronto, Canada; San Diego Natural History Museum; and Science Centre Singapore with PUB Singapore.

Sponsored by JPMorgan Chase & Co. and Underwriters Laboratories. Generous support provided by Wege Foundation, Joyce Foundation, Chicago Department of Water Management, Metropolitan Water Reclamation District of Greater Chicago, Oberweiler Foundation, and Philip Enquist and Joanna Karatzas.

See frozen tundras, wet marshlands, and dry deserts and discover the importance of our planet’s most simple and crucial natural resource in Water.

SPECIAL TOUR OPPORTUNITY!

IN CONJUNCTION WITH *WATER*, THE FIELD MUSEUM IS OFFERING A SPECIAL TOUR OF ONE OF CHICAGO’S WATER INTAKE CRIBS ON SATURDAY, JULY 11. FOLLOWING THE TOUR, VISITORS WILL HOP ON A WATER TAXI AND GO BEHIND-THE-SCENES AT THE MUSEUM TO TALK TO SCIENTISTS ABOUT ALL THINGS RELATED TO WATER AND FISH. REGISTRATION IS REQUIRED—CALL 312.665.7400.

WATER: Amazing Facts and Water-Saving Tips

FACT: The average person living in the United States uses over 100 gallons of water per day.

TIP: Make sure you have a water meter installed (homes with meters average 15 percent less water use).

FACT: Bottled water can be 1,000 times more expensive than tap water and requires additional water to package and transport.

TIP: Drink tap water instead of bottled and reduce the drain on regional aquifers from bottled water companies.

FACT: The average American toilet uses five gallons with each flush.

TIP: Install a new dual-flush toilet or put a brick in the tank of your old one to reduce the amount of water used.

FACT: The average person living in poverty in Africa uses less than three gallons per day, the same amount used while brushing your teeth.

TIP: Turn off the faucet while brushing. Never let the tap run unnecessarily.

FACT: It takes almost 2,000 gallons of water to produce a pair of jeans and 400 gallons to make a new shirt.

TIP: Take care of your clothes; think carefully before buying new ones.

FACT: The average roof collects 625 gallons of water during a rainstorm that drops one inch of water.

TIP: Capture water with a rain barrel and use to water plants and gardens.

FACT: It takes about 70 gallons of water to produce one gallon of gas.

TIP: Carpool, use public transit, and walk or bike whenever possible.

FACT: Depending on your shower, up to 15 gallons of water can be wasted while waiting for the shower water to warm up.

TIP: Install a low-flow shower head and keep your water heater in good working condition.

Witnessing Change

Explore the Civil Rights Movement in *Road to Freedom*

A Conversation with Hilary Hansen

By Emily Waldren, Editor

Images from the 1960s civil rights movement have become part of our national identity. Photographs taken during this tumultuous time helped bring the movement to the forefront of Americans' minds. A new exhibition, *Road to Freedom: Photographs of the Civil Rights Movement 1956–1968* (through Sept. 7), showcases some of these iconic images. The exhibition features over 150 black and white photographs taken by artists, photojournalists, and amateurs alike. Featuring some of the great leaders of the Civil Rights movement, the photographs also depict the multitude of activists and students who took to the streets in the pursuit of freedom and equality during the 1950s and 60s. ITF recently spoke with project manager Hilary Hansen to learn more about this moving exhibition.

© DANNY LYON/MAGNUM PHOTOS

ITF: *Why is it important that this exhibition be shown at The Field Museum?*

Hansen: Museum anthropologists actively study cultures from around the world, traveling to places like Papua New Guinea, China, and Mexico. Through excavations and research, they learn about the ways societies have changed over time. But major social changes are not confined to the distant past or ancient cultures. The photographs in *Road to Freedom* document one of the most important social movements of our time: the fight for racial equality.

ITF: *The exhibition features photographs taken by professional photographers as well as images from amateurs. What do you think that adds to the exhibition?*

Hansen: Most visitors will not be able to tell the difference between the photos taken by professionals and those taken by amateurs. Both are raw and powerful. But I think the amateur photos round out the display beautifully. They provide multiple perspectives of an event and offer a more complete understanding of what was going on at the time.

EMILY WARD © THE FIELD MUSEUM

*Hilary Hansen,
Project Manager*

© BUILDER LEVY

© LEONARD FREED/MAGNUM PHOTOS

© MORTON BROFFMAN

© BILL EPPRIDGE

ITF: *As someone who did not live through this time period, but studied it in school, how has the exhibition taught you or opened your eyes?*

Hansen: Most of all, I'm blown away by the unwavering courage I see in the faces of the activists. They are determined to do what is necessary and what's right. I'm also shocked and embarrassed by the hatred I see in the faces of the supporters of segregation.

ITF: *What images in the exhibition stand out and move you the most?*

Hansen: One of the images that made me pause is the photo of Ben Chaney, who was about 10 years old at the time the photo was taken (*left, bottom*). He is sitting in the family car with his mom, dad, and siblings, on the way to the funeral of his big brother James. James Chaney was one of three students killed in Mississippi during Freedom Summer by the Ku Klux Klan in 1964. The look in Ben's eyes is heart-wrenching. He looks sad, no doubt, but he has an air of dignity and resolve about him.

ITF: *What do you hope Museum visitors will take away having seen Road to Freedom?*

Hansen: I think visitors will leave having a more complete understanding of the breadth and depth of the Civil Rights Movement. Most of the movement's leaders are well known today, but Martin Luther King, Jr. could not do it alone. He relied on the thousands of foot-soldiers—volunteers, students, and community organizers—to keep the movement alive. You'll see many of those people in the exhibition, and learn their stories. **ITF**

Road to Freedom: Photographs of the Civil Rights Movement 1956–1968 is organized by the High Museum of Art, Atlanta.

This exhibition is supported by the Robert Mapplethorpe Foundation and an award from the National Endowment for the Arts, which believes that a great nation deserves great art.

Thanks to the generous support of the Chicago Urban League.

Roam The Field Museum at Night and Doze with the Dinos!

By Krystal Villanosa, Communications and Funding Administrator

Imagine roaming The Field Museum at night! The lights dim as you explore the rituals of ancient Egyptian culture, guided by the light of your flashlight. Next, you prowl an African savannah with giraffes, hippos, and man-eating lions. Before you know it, you're in the palace in Bamum, Africa, rubbing elbows with royalty. By the end of the night, you are too tired to skin the fish that you and your Inuit friend have caught for breakfast.

Bring your sleeping bag and explore one of the most exciting spots in town! *Dozin' with the Dinos* is a unique opportunity for families with children ages 6–12 to spend the night at The Field Museum. Begin your evening with activities based upon a Field Museum exhibition. Afterwards, watch a performance, munch on a snack, and explore the Museum's wondrous exhibitions, including *Inside Ancient Egypt*, by flashlight. You'll end the night by spreading your sleeping bag in some of our most popular exhibitions.

Now there are two new ways that you can experience *Dozin' with the Dinos*. Sign up for Premium Package 1, which includes all the fun of a regular overnight with sleeping spots in our *Evolving Planet* exhibition! You can also sign up for Premium Package 2, which includes all the fun of a regular overnight, sleeping spots in *Evolving Planet*, and a behind-the-scenes tour with a Field Museum scientist!

Overnights are on Fridays from 5:45pm through 9am the following morning. Remaining dates in 2009 are as follows: June 26, Aug. 14, Nov. 20 and 27. Note that space is very limited for our Premium Packages, but Members now get first dibs on 2010 dates! See the program calendar for dates and information. **ITF**

SUMMER/FALL 2009

Crown Family PlayLab

Rediscover the *Crown Family PlayLab* this summer! You and your little explorer can play in a dinosaur nest, dance to rhythms from different cultures, dress up as Illinois Woodland creatures, and more! With an endless variety of activities, the *Crown Family PlayLab* offers new adventures every time you visit.

Below are some of the programs you and your young adventurer can enjoy in the *Crown Family PlayLab* but make sure to look inside to see them all!

AT THE ART STUDIO* Family Program

Splish Splash Save! Water play in the summer is a lot of fun! Come learn some creative ways to conserve water on a warm sunny day as you and your family create art based on water themes.

DAILY IN JULY, 10am-2pm

KRAFT STORY TIME* Family Program

Take a seat in the *Crown Family PlayLab* to hear a story and make an art project to take home—all in 20 minutes!

DAILY IN JULY, 11:30am & 1:30pm

FAMILY FIELD DAY* Family Program

Take part in fun and free art and science activities in the *Crown Family PlayLab* and in the rest of the Museum. Be an explorer, scientist, artist and much more!

AUGUST 15, 11am-2pm

The *Crown Family PlayLab* is generously sponsored by the Crown family.

CROWN FAMILY PLAYLAB

PERMANENT EXHIBITION

Little explorers have their own place in a big museum!

The Crown Family PlayLab is generously sponsored by the Crown family

DANIEL F. AND ADA L. RICE DNA DISCOVERY CENTER

PERMANENT EXHIBITION

Discover what DNA is, how it works and what it can tell us about ourselves and other living things.

This exhibition is generously supported by the Daniel F. and Ada L. Rice Foundation. We gratefully acknowledge The Pritzker Foundation's generous support of the Pritzker Laboratory for Molecular Systematics and Evolution. We express our appreciation to Misty and Lewis Gruber for establishing an endowment in support of research in the Pritzker Laboratory

EVOLVING PLANET

PERMANENT EXHIBITION

Go on an awe-inspiring journey through 4 billion years of life on Earth, from single-celled organisms to towering dinosaurs and our extended human family. Unique fossils, animated

videos, hands-on interactive displays, and recreated sea- and landscapes help tell the compelling story of evolution—the single process that connects everything that's ever lived on Earth.

Evolving Planet is made possible by Kenneth and Anne Griffin. The Elizabeth Morse Genius Charitable Trust is the generous sponsor of *Evolving Planet's* Genius Hall of Dinosaurs.

THE ANCIENT AMERICAS

PERMANENT EXHIBITION

Step into the windswept world of Ice Age mammoth hunters. Walk through a replica of an 800-year-old pueblo dwelling and imagine your entire family cooking, eating, and sleeping in one small room. Explore the Aztec empire and its island capital,

Tenochtitlan, a city of more than 200,000 people and an extraordinary feat of engineering for any era.

The Ancient Americas is made possible by the McCormick Foundation.

GRAINGER HALL OF GEMS

PERMANENT EXHIBITION! OPENS OCTOBER 23, 2009

Marvel in the beauty and splendor of gemstones in The Field Museum's newly renovated Grainger Hall of Gems.

The Grainger Hall of Gems is generously sponsored by The Grainger Foundation

See these before they go!

REAL PIRATES: THE UNTOLD STORY OF THE WHYDAH FROM SLAVE SHIP TO PIRATE SHIP THROUGH OCTOBER 25, 2009

Explore over 200 artifacts, including cannons, swords, coins, gold and jewelry, as you set sail on the *Whydah* with legendary pirate Sam Bellamy and his crew in *Real Pirates*.

An Exhibition from National Geographic.
Organized by Arts and Exhibitions International.

ROAD TO FREEDOM: PHOTOGRAPHS OF THE CIVIL RIGHTS MOVEMENT 1956-1968

JUNE 5 - SEPTEMBER 7, 2009

Through more than 150 iconic black-and-white photographs, discover the great leaders of the Civil Rights Movement, as well as the multitude of activists and students who took to the streets in the pursuit of freedom and equality during the 1950s and 60s.

Road to Freedom: Photographs of the Civil Rights Movement 1956-1968 is organized by the High Museum of Art, Atlanta

WATER

THROUGH SEPTEMBER 20, 2009

Wonder over water as you immerse yourself in one of the most fascinating yet overlooked substances in the universe.

Water is organized by the American Museum of Natural History, New York, and the Science Museum of Minnesota, St. Paul, in collaboration with The Field Museum, Chicago; Great Lakes Science Center, Cleveland; Instituto Sangari, São Paulo, Brazil; National Museum of Australia, Canberra; Royal Ontario Museum, Toronto, Canada; San Diego Natural History Museum; and Singapore Science Centre with PUB Singapore.

Sponsored by JPMorgan Chase & Co. and Underwriters Laboratories. Generous support provided by Wege Foundation, Joyce Foundation, Chicago Department of Water Management, Metropolitan Water Reclamation District of Greater Chicago, Oberweiler Foundation, and Philip Enquist and Joanna Karatzas.

BUNCE ISLAND: A BRITISH SLAVE CASTLE IN SIERRA LEONE

JULY 29, 2009 - FEBRUARY 28, 2010

Discover the inner workings of the Bunce Island "slave castle" from the days of the transatlantic slave trade, and learn how some African-Americans today are tracing their ancestry back to this site.

This exhibition was curated by Joseph A. Opala, James Madison University.

Marae Gallery sponsored by Baker & McKenzie. Presentation of this exhibition at The Field Museum is made possible by curator Joseph A. Opala and Accenture.

Not a Drop to Drink

How Plants Survive Waterless Conditions by Sticking Together

If you've forgotten to water your houseplants before leaving on vacation, you know what happens when plants lose their water supply. Since plants are immobile, they can't find their own source of water. Totally dependent on their habitat, the only way plants can survive dry periods is by collecting water in storage systems, such as the thick stems of cacti.

Hardly relying on any water at all, lichens can grow in the desert on a number of surfaces such as rocks and cacti.

However, there is a group of lower plants—actually fungi—that is very tolerant to dehydration. Although lacking the water reservoirs that cacti have, the fungus is able to survive in the driest deserts of the world. These organisms are

called lichens, which are actually a combination of a fungal partner and their algal counterpart. Separate, fungi and algae are very sensitive to lack of water, but once these two join forces as lichen, they become tough and are able to survive in all habitats from the tropics to Antarctica, from the seashore to the mountain tops, and from the rainforests to the deserts.

In fact, lichens are even able to use the water found in fog, a feat impossible for flowering plants. This explains why the dry deserts along the coast of western South America and Namibia, in southern Africa have a rich lichen flora, with large amounts of lichens growing on cacti. The rocks in the deserts of the Southwest have different yellow, green or reddish colors due to the lichens growing on them.

Lichens are able to survive in harsh conditions because they stay dormant most of the day and are only active during a short period (sometimes less than an hour) in the morning. Once in full sunshine, the lichens start their "siesta" until the next day. This relaxed life results in low growth rate of lichens in deserts. However without competition from better adapted organisms, they not only survive, but are the most successful plant-like organisms in desert ecosystems.

Recent studies using DNA sequences by Field Museum scientists in cooperation with colleagues from Madrid and Chicago's Morton Arboretum showed that desert lichens grow slower, but also have a slower ticking molecular clock. That means that lichens in the wet tropics evolve at a faster rate than their desert counterparts. This discovery shows that water has an effect on life all the way down to the molecular level. However, this effect isn't as apparent to the naked eye as when you come home from a weekend trip and see your orchid dry and withering, thirsty for a drink of water! **ITF**

'Lichens are able to survive in all habitats from the tropics to Antarctica...'

Out with the Old and In with the New Behind-the-Scenes Exhibition Magic

By Hilary Hansen, Project Manager, Exhibitions Department

Exactly 105 hours. That’s all the time Daniel Breems, Field Museum production supervisor, had to disassemble *The Aztec World* after it closed in April and prepare 10,000 square feet of space for the next exhibition: *Water*.

To the world outside the Museum, moving exhibitions in a short amount of time might seem like a nearly impossible feat. Breems and his crew removed 300 objects from their display cases, performed a careful inspection of each and then packed the priceless cargo into custom-made crates. They took down, rolled up, and stored 50 fabric walls from inside *The Aztec World* and removed a 600-pound mural from over the exhibition doors. Breems helped manage nearly 10 couriers from lenders in the United States and Mexico. He supervised the use of special equipment to lift stone artifacts weighing several tons without exceeding the weight capacity for Museum floors or damaging the carpet. These tasks are just part of the process known as exhibition deinstallation.

How can so much be accomplished in so little time? Smart exhibition design gets you part of the way there. “Fabric walls instead of conventional drywall made teardown a lot faster” says Breems. “Drywall is messy and time consuming. Fabric walls, on the other hand, are hung from cables fastened to the ceiling. We just pulled them down and rolled them up.”

‘To the world outside the Museum, moving exhibitions in a short amount of time might seem like a nearly impossible feat.’

But it’s the hours of preparation and meticulous coordination that make the difference between a fast-paced deinstallation and a frantic one. With the *Water* installation team ready and waiting to get into the former *Aztec World* exhibition space, time was of the essence for Breems. Months before deinstallation, he had

KADRIE HANSEN/IFL

already identified how many people would work with him, what equipment would be needed to move artifacts such as a three-ton stone snake, and the best time to move crates during public hours. Breems also worked closely with *Water* production supervisor Susan Phillips to identify any opportunities for cost or time savings.

Breems can only do so much planning though. “One of the hardest parts is scheduling and trying to anticipate every complication. Problems always come up, and you have to react quickly,” he explains.

Complications and set-backs are expected when getting an exhibition packed up and out the door. But those moments don’t take away from the joy of a job well done for Breems and his crew.

His favorite part about an exhibition deinstallation? Watching a crate of artifacts getting sealed shut. “Then I can relax, knowing I did my part well, and they are headed home,” Breems says. **ITF**

Breems and the team carefully remove the Eagle Warrior before crating and sending him back to his home in Mexico.

Come Face to Face with the World Beneath Your Feet

By Michelle Clayton, Director of Membership

Now that the Chicago winter is behind us, you've no doubt noticed some changes in your own backyard. As flowers bloom and leaves begin to emerge, there is also a bustle of activity beneath your feet. Did you know that if you took one teaspoonful of soil from your own backyard, you would find more than a billion organisms in it? Even more amazing—30 to 40 percent of the organisms in that soil are unknown species! It's hard to imagine the tiny creatures that exist in soil, but in *Underground Adventure*, you can come face to face with them.

One of The Field Museum's most popular exhibitions, *Underground Adventure* will "shrink" you to the size of a bug and set you loose on a journey unlike anything you have ever imagined. Among the roots and wormholes, you'll discover a world inhabited by extraordinary plants, fungi, and creatures and learn just how important soil is to our ecosystem. As you travel deeper, investigate root tips, track the burrowing patterns of moles, hear the lonesome clawing of a mole cricket, watch a wolf spider twice your size devour a beetle grub, and witness a female earwig fiercely guarding her brood.

You will emerge with a new understanding of your own relationship to soil. You and your family can continue your discoveries by looking in your own backyard for the critters you met in *Underground Adventure*. **ITF**

Regenstein Lab Scientists Prepare Artifacts to Travel the World

By Emily Waldren, Editor

More than 130 artifacts from the Museum's famed Pacific collection will soon be part of a new exhibition touring at two Mexican museums: the National Museum of Cultures, in Mexico City and then at the Nave Lewis in Monterrey. For the past four months, Field Museum scientists have been hard at work in the Regenstein Laboratory making sure these priceless artifacts are in good

condition and able to make the journey from Chicago to Mexico and back again. Getting these artifacts ready for travel and display takes time, careful work, and a lot of patience.

Recently, a statue chosen for the upcoming exhibition caused scientists some worry. The statue (*left, top*), from the Solomon Islands, was most likely used during coming-of-age festivals. The statue's arms are separate from the rest of its body and when Field Museum scientists first examined them, it appeared that the left arm was loose, and might become detached during travel. In order to learn more, scientists put the statue through an x-ray machine; after scanning, it was revealed that the statue had been fixed before, and actually the arms were very secure.

Another item that needed to be examined carefully was a feather costume (*left, bottom*), which until recently was on display in the Museum's *Pacific Spirits* exhibition. The costume is made up of hundreds of feathers all attached to a large fishnet. Each stitch had to be carefully examined and reinforced, if necessary, to make sure that not a single feather would be lost. This was a long process, but vital to preservation of artifacts like this.

Conservation work performed in the Regenstein Laboratory is important for a number of reasons. Regenstein Conservator for Pacific Anthropology J.P. Brown explains, "By collecting these artifacts, the Museum takes on the responsibility to preserve them." The Museum must ensure that the artifacts are maintained for many years. This helps other museums create new exhibitions using our collections, but more importantly, it ensures that these artifacts will continue to lend themselves to scientific research for years to come.

As always, you can see scientists at work by visiting the Regenstein Laboratory (inside *Traveling the Pacific*). Be sure to stop by this summer to watch the continued conservation on the Pacific artifacts. Field Museum scientists will continue their work throughout June and July, before sending these items to their temporary homes in Mexico. **ITF**

A Festival of Epic Proportions

By Stephanie Fitzgerald, Writer

Discover feats of artistry and spiritual transformation in *Sacred Waters: India's Great Kumbha Mela Pilgrimage* (through July 19) in the Museum's Marae Gallery on the upper level.

Through the lens of photojournalist Jean-Marc Giboux, gaze into the lives of ash-covered holy men, masters of tantric yoga, and everyday people as they celebrate at the Kumbha Mela festival, a Hindu pilgrimage in India and the largest human gathering on Earth. The tradition of Kumbha Mela is rooted in the Hindu belief that gods and demons once clashed over a pot (*kumbha*) that contained the nectar of immortality. During this battle, drops of the nectar fell down to Earth in four locations, which became sanctified as the sites of the pilgrimage. Consequently, it is thought that, at certain times in a twelve-year cycle, rivers passing through these locations change into the nectar of the gods, and the river-banks transform into sites of ceremony and prayer.

Over 40 vibrant photographs capture the magnificence of the Kumbha Mela festival and provide a glimpse into the diversity of India. Witness these fleeting, joyful gatherings, and discover their dazzling processions, theatrical performances, and the athletic and devotional practices of holy men. Then, proceed with the pilgrims to the culmination of their journey—a bath in divine nectar.

Sacred Waters is an inspirational look at the lives of millions of pilgrims who seek to come into direct contact with the divine. **ITF**

This exhibition is organized by Jean-Marc Giboux and The Field Museum.

SAVE THE DATE!

Be sure to save the date for the Members' viewing of *The Nature of Diamonds* on Monday, Oct. 26, 3–10pm.

Look for more information on this exciting exhibition in the next issue of ITF.

The 128.54-carat Tiffany Diamond, one of the world's largest and finest fancy yellow diamonds is showcased in this well known setting designed by legendary jeweler Jean Schlumberger. The accompanying bird, is designed with white and yellow diamonds, ruby, gold, and platinum.

Did you know?

When Sue first arrived at the Museum, she weighed five tons (10,000 pounds!). Most of that was dirt and rock, known as the matrix. After being cleaned by our geology staff, she now weighs just over 4,100 pounds.

always be discovering.

Corporate Corner

Corporate Membership

Companies who join the Museum's Corporate Relations Program receive free general admission for all of their employees, significant discounts to host a private event or meeting, customized tours for clients or executives, and more. Contributions provide critical operating support for the Museum.

To join, please contact Kenda Hallman at 312.665.7668.

Education Programs

Corporate contributions to the Museum's Education Programs enable over 250,000 school children to learn about natural history and science through field trips and special projects each year. Partners such as the Motorola Foundation and JP Morgan Chase & Co. help bring science to life for students and teachers by supporting our education initiatives.

To learn more about supporting the Museum's Education Programs, please contact Cate Huetter at 312.665.7780.

Founders' Council and Annual Fund Update and Special Events

The Field Museum has many wonderful exhibitions in the months to come that you won't want to miss! Need activities for your out-of-town guests? Come to The Field to see *Water*, and other exciting exhibitions such as *Real Pirates*, *Evolving Planet*, *Ancient Americas* and the *DNA Discovery Center*. We hope to see you often and are here to help you plan your visit.

Thank you to all of our Annual Fund, Founders' Council and Chairman's Circle members for your involvement and dedication to The Field Museum. The research, education programming and conservation efforts of The Field Museum are more important than ever, and your support makes it possible. Remember that each giving level provides many special benefits and unique events with our scientists. For more information or to become a member of The Founders' Council or the Annual Fund, please call Sara Murphy at 312.665.7801 or email annualfund@fieldmuseum.org.

John King: The Boy Pirate

In *Real Pirates: The Untold Story of the Whydah from Slave Ship to Pirate Ship*, visitors will learn about Sam Bellamy, a famous pirate from a period we call "The Golden Age of Piracy." Bellamy was a pirate captain for less than a year, but he and his crew captured more than 50 ships in that short amount of time!

In November of 1716, Bellamy and his crew attacked and looted a ship called the *Bonetta*. One of the *Bonetta*'s passengers was John King, a young boy traveling with his mother. John was fascinated by the pirates and became determined to join them. Leaving his mother behind, John joined Bellamy and his crew.

John King was probably only about 10 years old at the time he became a pirate! John sailed with Bellamy for the next six months and was on board the *Whydah* when it sank off the coast of Massachusetts on April 26, 1717. Visitors to *Real Pirates* can see John's silk stocking and shoe, which were found at the wreck site of the *Whydah*. **ITF**

SURE HUNT!

search for treasure at The Field Museum

You may not be able to sail the seas like John King, but the Museum is filled with hidden "gold." **Cut this page out** and take it with you the next time you and your family visit, **and go on your own treasure hunt!** Working from the ground level up, see if you can find:

- An **Indian elephant mask** in the **Crown Family PlayLab**
- A **gold beetle** in **The Insect World** cases on the Ground Floor
- A **huge brass snake** from Bamum in **Africa**
- An **American goldfinch** in **Nature Walk**
(HINT: Look in the North American Birds section.)
- Tumbaga disks** from the Quimbuya people in **Ancient Americas**
(HINT: Look for the "Powerful Leaders" section.)
- Matching **mother-and-daughter gold shoes** on the **"shoe wall"**
- A **gold Italian necklace with three large medallions** in the **Grainger Gallery** on the Museum's mezzanine level

The more things change, the more they stay the same

By Sara Bomer, Writer

This photograph of two Museum staff members cleaning the African elephants was taken over 60 years ago, but the same meticulous techniques are still used today to preserve The Field's most beloved pieces. This past February, Museum paleontologist Bill Simpson gave Sue a thorough spring cleaning, dusting every rib, tooth, and toe carefully. It may seem old-fashioned to use a feather duster on Sue, but it is

the safest way to clean everyone's favorite T. rex. The constant maintenance of artifacts is essential and done to ensure preservation.

Water Store Has Gifts to Keep You and the Earth Healthy

Did you know that about 60 percent of your body is water? It's recommended that you drink eight 8-ounce glasses of water a day. Our friendly penguin water cooler keeps you on track to meet that recommendation. Just fill him up in the morning and you can sip your way to a healthier you without adding disposable bottles to the Earth's landfill. At 17 inches high, this little guy is perfect for your desk or dorm room. Visit the Water Store (inside the Water exhibition) to discover other ways to use water and save the planet. Also available online, where you can shop 24 hours a day.

All proceeds from the Stores directly support the Museum's public and scientific programs, and all Field Museum members receive 10 percent off their purchases in the Museum Stores.
